

AI-Powered Enterprise Software Development

The New Paradigm

Uli Hitzel, April 2025

A **EVERYTHING**
EVERYWHERE
ALL AT ONCE

- AI coding tools dramatically boost productivity - 10x output with smaller, senior teams
- Innovation boost, experimentation with less risk, speed without compromise of security
- Your developers are already using these tools - lead or get left behind
- Build a center of excellence first, not mandatory adoption across all teams
- Success requires new skills: communication, product mindset, and more

windsurf.vim

Free, ultrafast Copilot alternative for Vim and Neovim

Windsurf autocompletes your code with AI in all major IDEs. We [launched](#) this implementation of the Windsurf plugin for Vim and Neovim to bring this modern coding superpower to more developers. Check out our [playground](#) if you want to quickly try out Windsurf online.

Contributions are welcome! Feel free to submit pull requests and issues related to the plugin.

1

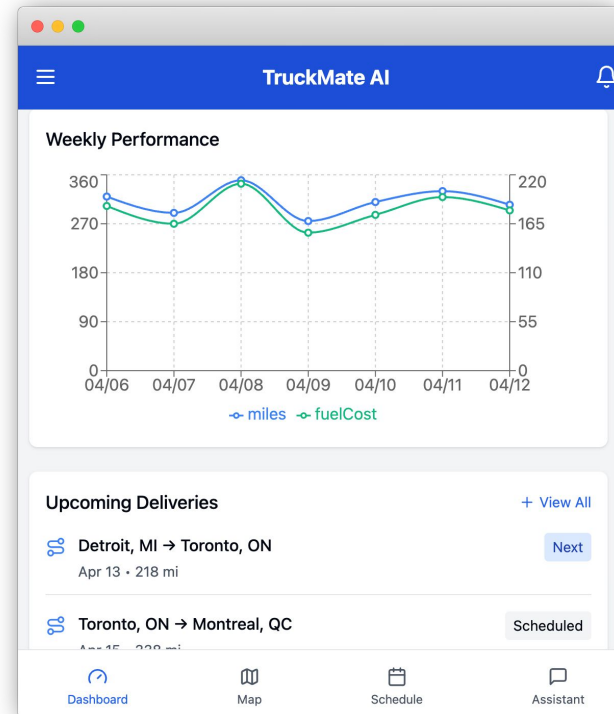

From Whiteboard to Working Prototype

CIO's Vision

→ Afternoon Demo

→ Executive Buy-in

Great for non-coders!

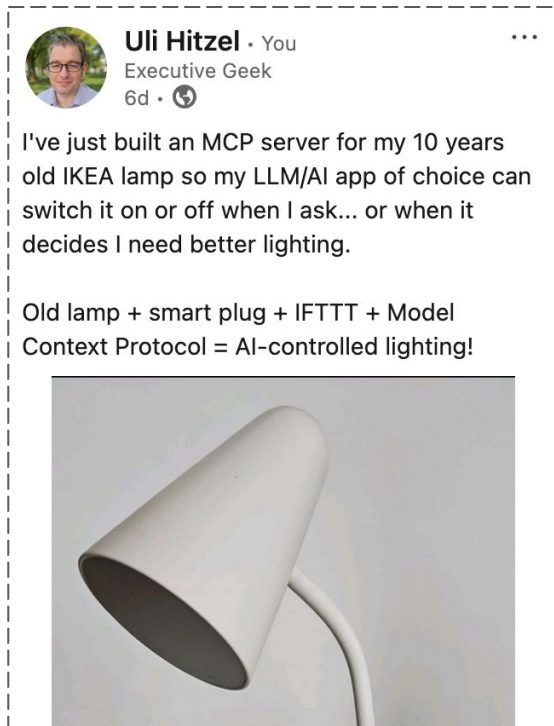

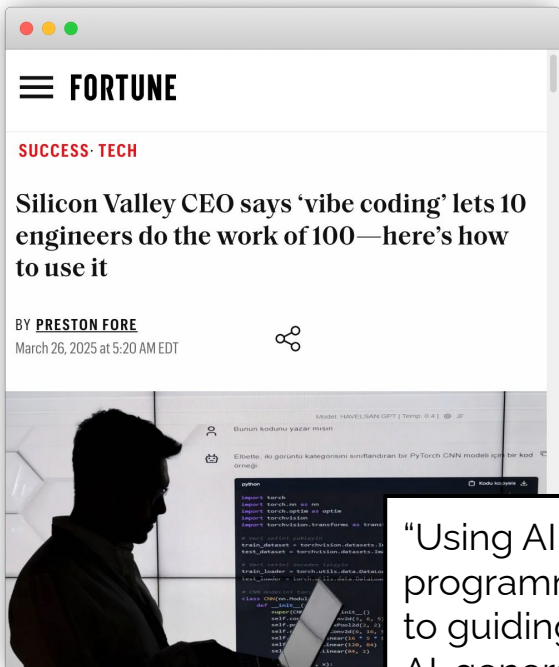

2

Vibe Coding

Vibe Coding is real - but supervision is essential

- Describe what you want, not (necessarily) how to build it
- Expert supervision makes the difference
- AI handles syntax, you focus on architecture
- Guide rather than type, but always validate

“Using AI to generate code, shifting the programmer's focus from manual coding to guiding, testing, and refining the AI-generated code”

3

Agentic AI: The Game Changer

Navigates options → Executes commands → Learns from failures

- Persistent problem-solving through trial and error
- Runs commands and tests solutions automatically
- Like having a determined junior engineer
- Solves problems other AI tools can't handle
- Not just suggesting code - building working solutions

4

Enterprise Reality Check

Security ↔ Productivity ↔ Governance

- Code leaving your environment is a non-st for many regulated industries
- No private/on-premise version of Claude 3 exists yet → dedicated AWS deployment
- Weekly tool changes make standardization difficult
- Enterprises need stable platforms with predictable capabilities
- Balance innovation with compliance requirements

5

The Evolving Role of Developers

- **START DOING:** Embrace AI Tools, Critical Thinking & Problem-Solving
- **DO MORE:** AI-Enhanced Productivity, Collaborate Cross-Functionally
- **DO BETTER/FASTER:** Rapid Prototyping, Improve Code Quality, Automate Routine Tasks
- **LEARN & ADAPT:** Continuous Learning, Experiment with AI Tools
- **OUTSOURCE TO AI:** Routine Tasks, Core Development

6

Communication: The New Superpower

The ability to communicate clearly is becoming as important as writing code

- Technical brilliance doesn't guarantee AI or product success
- Developers must become their own product managers
- Clear problem definition and stakeholder communication
- Translate business needs into technical solutions
- Communication excellence is the new competitive advantage

7

Reshaping Development Teams

35 → 8 → Impact?

- Smaller teams with broader skills deliver more
- Junior roles evolve: system thinking over syntax
- Every developer needs product thinking skills
- Communication, architecture, and verification
- Quality and impact over quantity of headcount

8

The Permanent Beta → Need For Agility

Today's innovation is tomorrow's legacy

- AI tools evolve weekly, not yearly
- Claude 3.5 v2 today, what tomorrow?
- Enterprises need stability for training and governance
- Impossible to standardize on constantly changing tools
- Need flexible frameworks, not rigid standards
- Adapt to the permanent beta mindset

9

Enterprise AI Development Quadrant

People & Organization

- Cross-functional AI team
- Center of Excellence
- Smaller, skilled teams
- Broader skill requirements

Process & Governance

- Audit current usage first
- Clear code ownership rules
- Guardrails, not gates
- Enable with boundaries

Technology & Tools

- Start with experienced devs
- Secure data environments
- Non-technical sandboxes
- Validation frameworks

Culture & Skills

- Communication excellence
- Prompt engineering training
- Solution verification skills
- Measure ideas, not just code

Why Wait?

- Your developers are probably already using AI coding tools → Shadow AI is already in your organization
- Developers paying out-of-pocket for productivity gains
- Creates hidden risks: security, compliance, inconsistency → Better to acknowledge and guide than prohibit
- Use Windsurf: Experimentation with Less Risk, Speed without compromise of security
- Early adopters gaining massive competitive advantage
- AI-assisted development is becoming mainstream, and enterprises that adapt quickly can gain a significant edge.

Getting Started Today

Tomorrow Morning:

- Identify your 3-5 most curious, skilled developers
- Get Windsurf subscriptions for this pilot team 😊
- Select one non-critical project for experimentation

Week One:

- Daily 15-minute sharing sessions on learnings
- Document patterns that work, challenges encountered
- Focus on rapid iteration, not perfect outputs
-

Month One:

- Create internal knowledge base of effective prompts
- Invite non-technical stakeholders to ideation sessions
- Measure productivity gains and showcase early wins

Now... you!

- For Developers: Create better code faster and invest the time saved in learning and understanding business needs
- For Leaders: Provide structure and guidance for AI adoption rather than ignoring the inevitable transition.

Humans are hooked.

Machines are learning.
