Key Points

- 1 – Build APIs:
Design First, Code Later

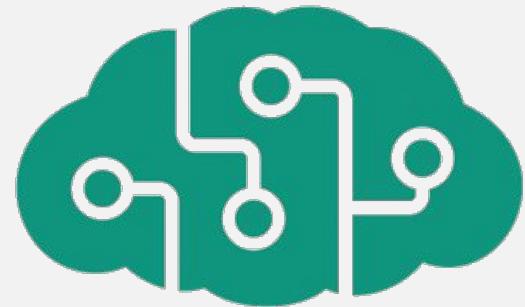

- 2 – Manage APIs:
Divide & Conquer

- 3 – API Adoption: Developer
Experience is Everything

You've just seen an example of this

- API abstracts something really complex
- Quick Results
- Easy to use → More Users → More Sample Data → AI learns → Better Product

Design First

- Start with the Interface
- Use API Design Guides
- Quick Prototyping & Mocking

```

6      For this sample, you can use the api key
7      authorization filters."

Contract First

- What can I do?
- What do I get?
- Data Models
- Authentication
- License
